Task Manager project notes
Software Engineering, midsem

PLAN

Project: task manager web app with a kanban board (To Do, In Progress, Done)
Trello / Jira too big for what we need, so making a simple one
Stack: React (Vite) for frontend, Node + Express backend, SQLite db, JWT + bcrypt for login, Jest + Supertest for tests
SQLite because no db server to install, its just one file

Sprint 1 (before midsem)
- signup / login / logout
- add, edit, delete tasks
- task has title, description, priority, due date, status
- board with 3 columns
- backend tests

Sprint 2 (after midsem)
- search and filter
- drag and drop between columns
- sprints + progress chart
- highlight overdue tasks
- dark mode

MEETING NOTES

Date: Oct 18, 2026
Present: Rounak, Priyansh, Shashank, Shivam

Progress
- backend + frontend first version working (Rounak)
- login and add task working end to end, this is our working feature for midsem
- report draft done

Decided
- due date always MM-DD-YYYY on the site
- browser date picker shows dd/mm/yyyy on some laptops so using a normal text box instead
- db stores date as yyyy mm dd so it sorts properly, frontend converts it
- everyone use node 20 or newer (better sqlite3 doesnt install on old node)
- no drag and drop for now, status dropdown on the card, drag and drop in sprint 2
- check input on both frontend and backend (empty title, wrong priority, bad date)

each user only sees their own tasks
priority = low / medium / high
status = todo / in progress / done
demo user for testing: demo@example.com / password123

Midsem stuff still left
diagrams as pdfs, test cases, SRS, PM docs, demo video (5 to 7 min), zip

Work split
Rounak: backend and database, repo cleanup, readme, db design pdf, source code folder for zip
Priyansh: testing and diagrams, test cases pdf + screenshots, uml + architecture pdfs, use cases pdf
Shashank: frontend and UI, wireframes pdf, record app demo, edit + upload video, video link txt
Shivam: SRS, final report, project plan, meeting log, contribution record, make zip + upload on moodle

Everyone
read and understand all the code
record about 1 min on your part for the video
send name + reg no to Shivam
check report before submitting

Everyone ok with the work split

WHO DID WHAT

Rounak Das (backend and database)
express server, login/signup with JWT + bcrypt, task routes, sqlite db, sample data, backend tests, first version of frontend, report draft

Priyansh Agarwal (testing and diagrams)
test cases table, test evidence, UML diagrams, architecture diagram, use cases

Shashank Karn (frontend and UI)
UI fixes, wireframes, demo recording and editing, video link

Shivam Verma (report and project management)
SRS, final report, project plan, meeting log, contribution record, zip + upload

All 4 of us checked this and agreed: Rounak Das, Priyansh Agarwal, Shashank Karn, Shivam Verma
